Developing with the Brightcove Player

Matt Boles

mboles@brightcove.com

Introducing the Course

What: Brightcove Player

- The Brightcove Player is based on the Video.js Player

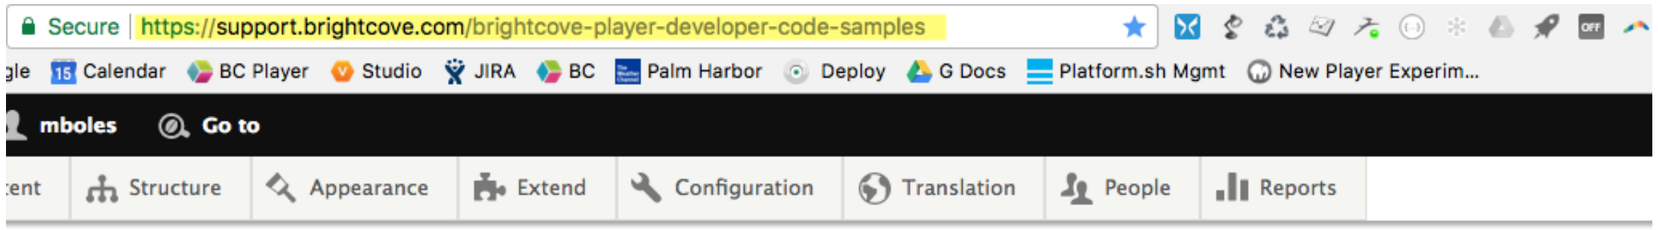
- Three core elements:
  - Video embed code - Places a video into a website using the HTML5 `<video>` element
  - JavaScript library - Makes the player work across browsers, their various versions and around device / platform bugs
  - Pure HTML/CSS skin - Creates a uniform look across HTML5 browsers and easy custom skinning for a branded look

What: Brightcove Player Development

- Used to customize, integrate with, or add functionality to, your players
- Uses HTML5, CSS, JavaScript and the Player API

Cross-platform standards
Developer-friendly
technologies

Why: Code Samples



Code Samples - Categorized

Advertising

- Ad Countdown Timer
- Ad Indicators in Playback Bar
- Displaying Ads Using Ad Cue Points**

Audio

- Horizontal Volume Control (1.x Player Only)

Call to Action

- Cue Points Display CTA**
- Dynamic Call to Action**

Communicate with iFrame

- Play Video from iframe Parent

Control Player Loading

- Loading the Player Dynamically
- RequireJS and Brightcove Player

Control Video Currently Playing

- Dynamically Change Source Videos**
- Kiosk App**
- Loading Video by Thumbnail**
- Selecting Rendition for Playback**

Enhance Player Display Behavior

Code Samples - Alphabetized

A

- Accelerated Mobile Pages
- Ad Countdown Timer
- Ad Indicators in Playback Bar
- All Time Video Views**
- Age Gate
- Age Gate with ModalDialog
- Are You Still Watching?

B

- Background Video

C

- Creating a Video Loop
- Cue Points Display CTA**
- Custom Playlist

D

- Disabling the Progress Scrubber
- Display Next Video Name from Playlist**
- Display Random Bumpers**
- Display Thumbnails on Hover
- Display Views in Controlbar**
- Displaying Ads Using Ad Cue Points**
- Download Video Plugin**
- Dynamic Call to Action**

How: Agenda

- Introducing the Course
- Setting Up to Develop with Brightcove Player
- Using JavaScript with Brightcove Player
- Getting Started with Brightcove Player Development
- Task1: Using the API to Play a Video
- Using the Player Catalog
- Task 2: Dynamically Loading and Playing a Video
- Using the mediainfo Property
- Task 3: Displaying Video Information in the HTML Page
- Using the Advanced (iframe) Player Implementation
- Task 4: Changing the Video in an iframe Player Implementation

How: Agenda (cont)

- Adding a Brightcove Plugin to a Player
- Task5: Adding the Overlay Plugin to a Player
- Task 6: Using the IMA Plugin to Play VAST Ads

Review poll questions also asked periodically

Prerequisites

- The session is designed for developers with basic HTML and JavaScript experience

Setting Up to Develop with Brightcove Player

Setup

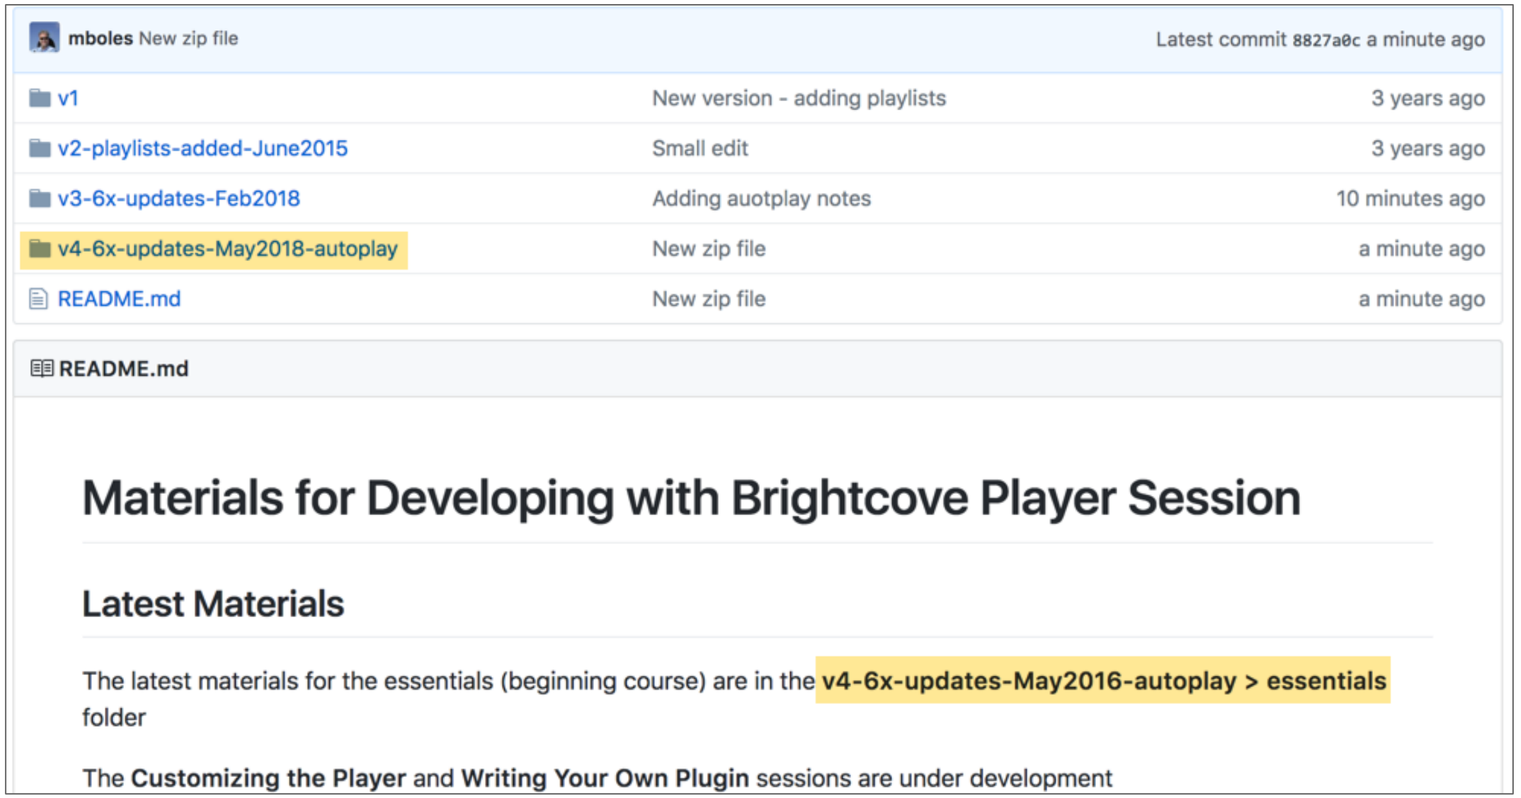
- Video Cloud Account

- You will also need an editor for HTML/JavaScript
  - Any plain text editor will work
  - An editor such as Atom, Chocolat, Sublime Text, Dreamweaver, BBEdit, or CoffeeCup, that provides code-hinting and syntax highlighting is recommended

- For iframe player implementation examples a web server is needed
  - XAMPP and WAMP free options

Getting Session Materials - GitHub

- Student files and slides
  - https://github.com/BrightcoveLearning/curriculum-developing-bc-player
  - http://bit.ly/1EDWaCA



Brightcove Player Documentation

- https://support.brightcove.com/brightcove-player-developer

Getting Started

- Learning Guide: Using the REST APIs
- Learning Guide: Video Advertising
- Overview: Brightcove Player
- Overview: Brightcove Player Plugins
- Quick Start: Brightcove Player
- Quick Start: Player Customization
- Training on Demand: Developing with the Brightcove Player

References

- Brightcove Player 5 to 6 Migration Guide
- Brightcove Player API Documentation (external site)
- Brightcove Player Error Reference
- Known Issues
- Player Feature Support by Browser
- Player Catalog
- Player Methods/Events API (external site)
- Brightcove Player System Requirements
- Guide: Playlist API
- Video Metadata from mediainfo

Plugins

- 360° Video Plugin
- Ad Only Plugin
- Advertising with the FreeWheel Plugin
- Advertising with the IMA3 Plugin
- Advertising with the Once UX Plugin
- Custom Endscreen Plugin
- Display Error Messages Plugin
- Display Overlay Plugin
- Display Thumbnail Previews Plugin
- DRM Plugin
- HLS Plugin
- Live DVRUX Plugin
- Manual Rendition Selection Plugin
- Overview: Player Plugins
- Player/Plugin Version Testing
- Plugin Version Reference
- Playlist UI Plugin
- Social Media Plugin
- Google Analytics Plugin (open source)

Advertising

- Ad Events and Ad Objects
- Ad Only Plugin

Publishing Videos / Players

- Assigning a Video to the Player Programmatically

Troubleshooting / Error Handling

- Brightcove Playback Technology App
- Brightcove Player Error Reference

Brightcove Player API Documentation

- https://brightcovelearning.github.io/Brightcove-API-References/brightcove-player/current-release/index.html

Demo: Programmatically Play a Video

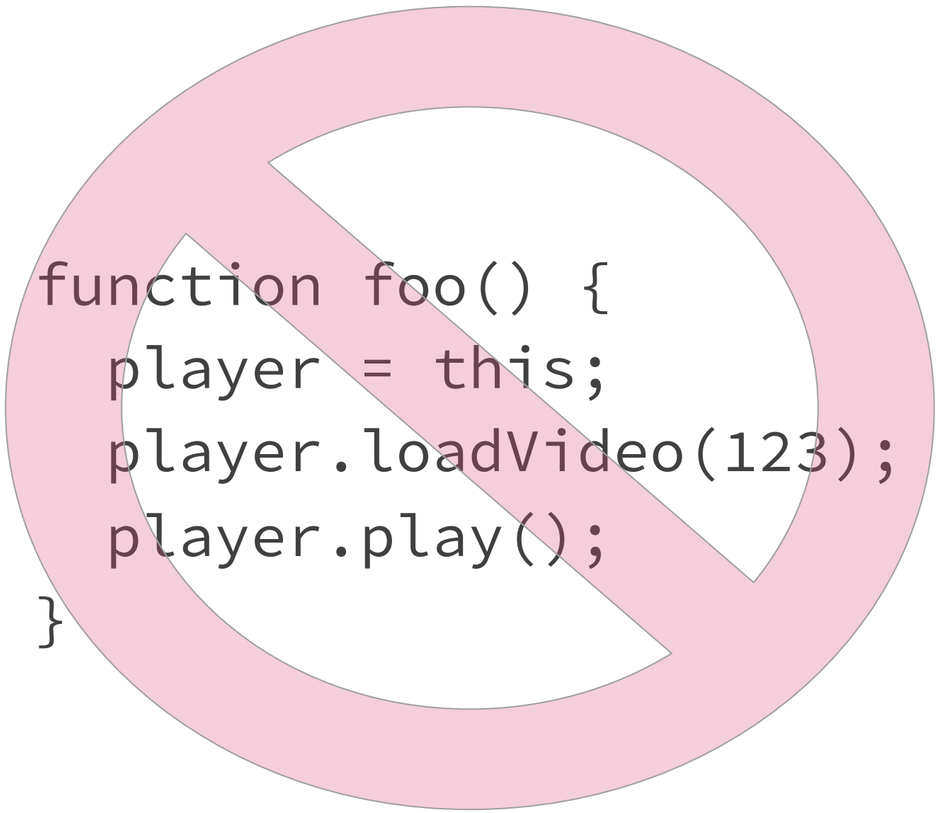
Quick look at the process of using the API

(a “Spiral Learning” event)

Using JavaScript with Brightcove Player

API Is Event Driven

- Event driven framework: Behaviors driven by the production, detection and consumption of events



```
function foo() {
  player = this;
  player.loadVideo(123);
  player.play();
}
```

```
videojs.getPlayer('myPlayerID')
  .ready(function(){
  var myPlayer = this;
});

otherComponent.on("play", function(){
  //Video is playing
});
```

Callback Functions

- A function passed to another function to be called at a later time

- Example: `getVideo()` called, then the callback function called when video data returned, which is a variable amount of time

```
getVideo(  function() {
  ...
});
```

1. getVideo() is called
2. Request sent for video
3. Video data returned (not sure how long this will take)
4. function() is called

Callback Function Implementations

- Anonymous functions: The function definition is the argument of the function
  - Function not named, hence anonymous
  - Called immediately after `getVideo` function has done its job

```
getVideo( function(){ … })
```

- Function declaration (“normal way”)
  - Loads before any code is executed, then called from different location

```
function foo() { … }
```

- Function expression
  - Loads only when the interpreter reaches that line of code, then called from a different location

```
var foo = function() { … }
```

Conceptual Blockbusters!!

- Brightcove Player API is event driven
- Callback function’s argument (function in parentheses) is not called until the callback function’s job is finished

Quick Review Poll

DwBP1

Quick Review Poll

DwBP2

Getting Started with Brightcove Player Development

Use Case: Play the video programmatically

Get Reference to Player

1. Create a `<script>` block
2. Use the `ready` method
3. Create variable that holds reference to the player instance

```
videojs.getPlayer('myPlayerID').ready(function(){
  var myPlayer = this;
});
```

Get Reference to Player - cont

- Note that using `ready()` functions correctly if you wish to interact with the player, for instance programmatically to change player behavior

- If you wish to immediately interact with the video, for instance use `play()`, another approach must be used
  - Detailed in the coming **Events** section

Player Methods

- Docs: //brightcovelearning.github.io/Brightcove-API-References/brightcove-player/current-release/Player.html#toc6__anchor

- Method example

```
myPlayer.play();
myPlayer.muted(true);
```

Player Events

- Docs: //brightcovelearning.github.io/Brightcove-API-References/brightcove-player/current-release/Player.html#toc120__anchor
- Use `on()`, `one()` and `off()` methods to add and remove event listeners

- Event example

```
myPlayer.on("timeupdate", showUpdate);
```

Player Events - cont

- If you wish to immediately interact with the video, for instance use `play()`, you should use the `loadedmetadata` event to be sure the VIDEO is loaded in the PLAYER

```
videojs.getPlayer('myPlayerID').ready(function(){
    var myPlayer = this;
    myPlayer.muted(true);
    myPlayer.on('loadedmetadata', function(){
      myPlayer.play();
    });
});
```

Considerations for autoplay

- Using the muted() getter/setter method to avoid the issue in this session
- Document available with details
  - Autoplay Considerations
  - https://support.brightcove.com/autoplay-considerations

- Sample “solution”
  - Brightcove Player Sample: Autoplay with Unmute Button for iOS/Safari/ Chrome
  - https://support.brightcove.com/brightcove-player-sample-autoplay-unmute-button-iossafarichrome

Conceptual Blockbuster!!

- When playing a video in the Video Cloud environment, TWO entities are involved
  - Player
  - Video

Task 1: Using the API to Play a Video and Display Event Object

Using the Player Catalog

Use Case: Change the video on user interaction

Player Catalog

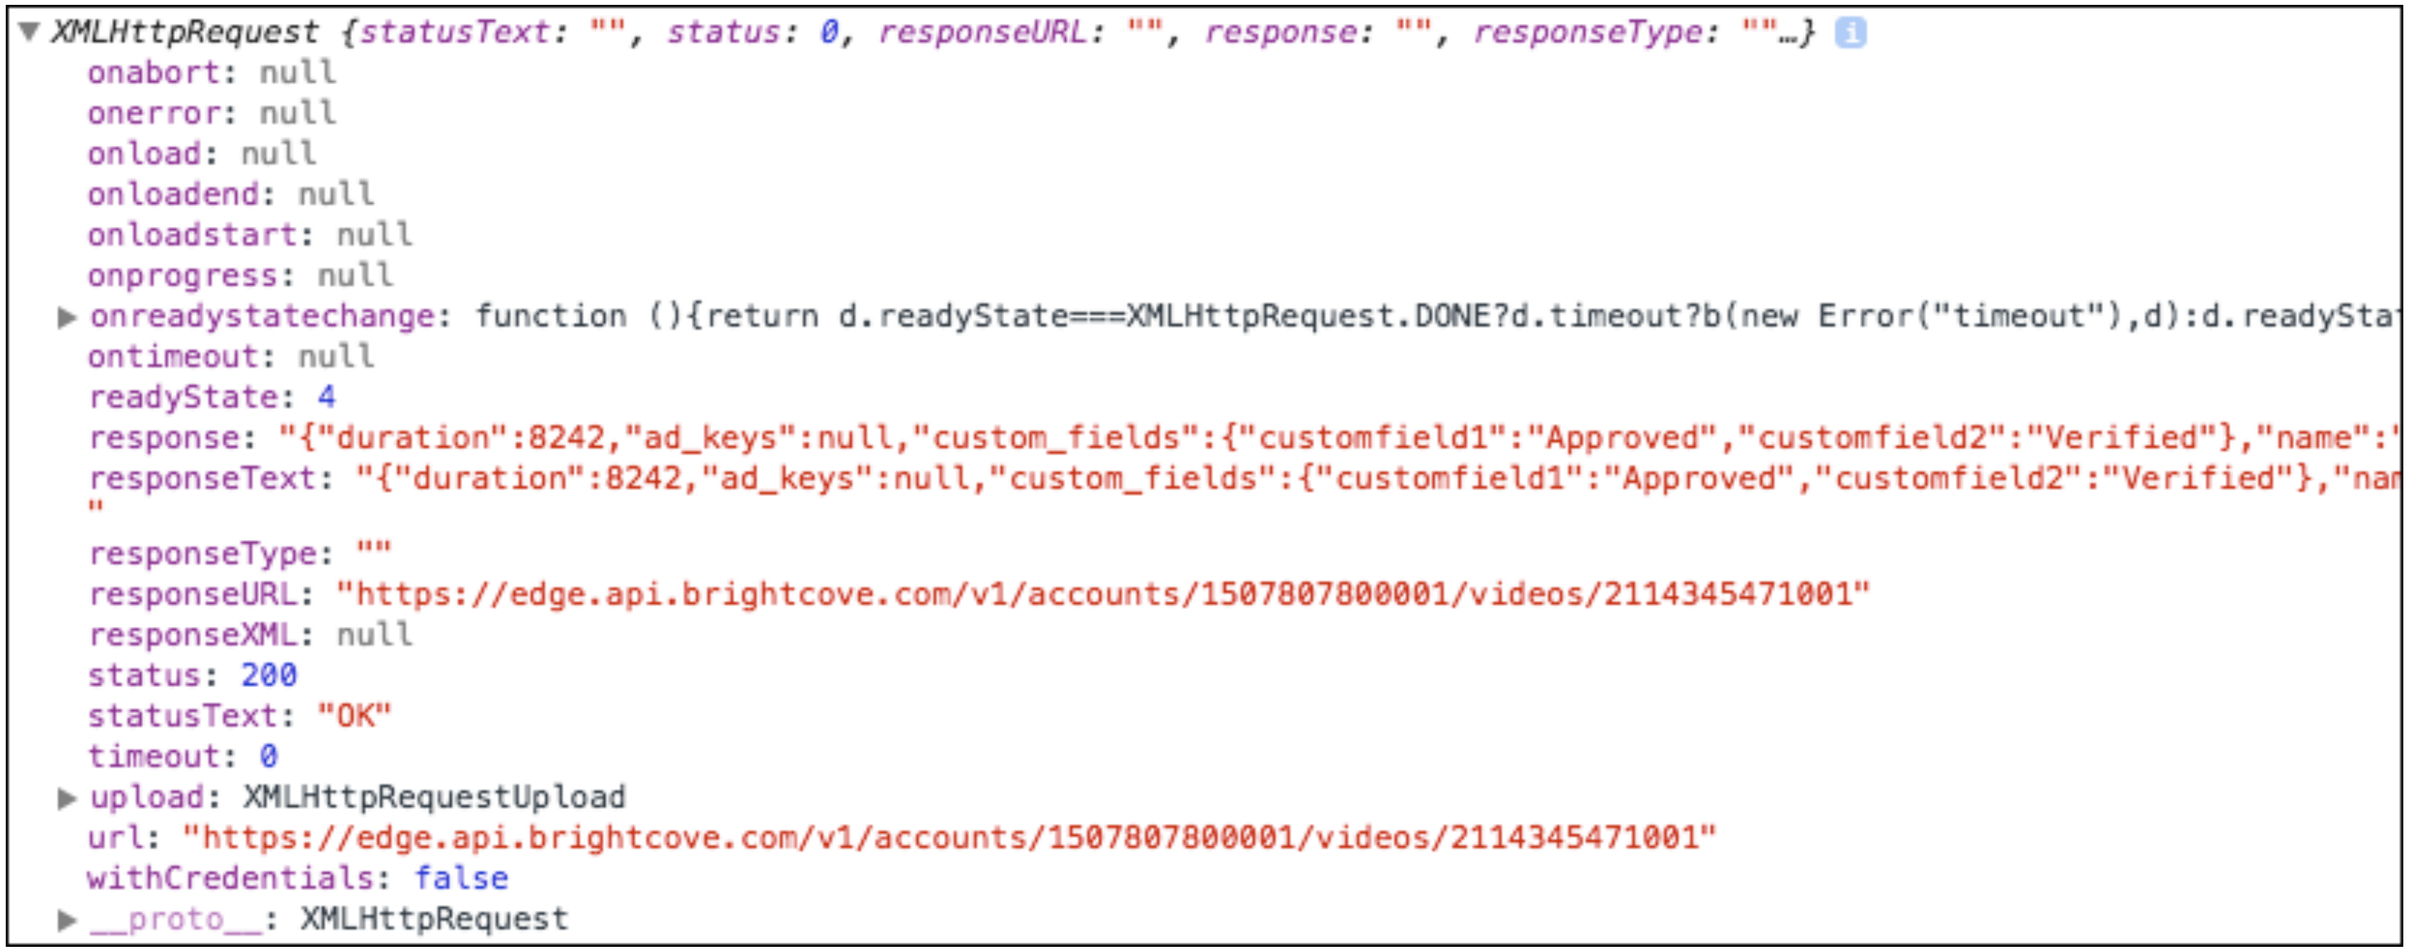
- Player Catalog is a helper library for making requests to the Video Cloud catalog
  - The catalog makes it easy to get information on Video Cloud media/ playlists and use

- Numerous methods available, but in this session will focus on

```
myPlayer.catalog.getVideo(videoID,callback)
myPlayer.catalog.getPlaylist(playlistID,callback)
myPlayer.catalog.load(videoObject)
```

Returned Object from getVideo()

- Catalog returns an object of type XMLHttpRequest



Task 2: Dynamically Loading and Playing a Video

Quick Review Poll

DwBP3

Using the mediainfo Property

Use Case: Display information about the video on the HTML page

mediainfo Property

- The `mediainfo` property is an object which contains information on the current media in the player
- The property is created and populated after the `loadstart` event is dispatched
- After the mediainfo object is populated, use it for convenient data retrieval when wishing to display video information, like the video name or description

Data in mediainfo

```
mediainfo
▼Object {description: null, tags: Array[3], cue_points: Array[0], custom_fields: Object, account_id: "1752604059001"…}
   account_id: "1752604059001"
   ad_keys: null
   created_at: "2015-03-04T20:56:14.260Z"
 ▶ cue_points: Array[0]
 ▶ custom_fields: Object
   data: (...)
 ▶ get data: function ()
   description: null
   duration: 29.215
   id: "4093643993001"
   link: null
   long_description: null
   name: "Tiger"
   poster: "https://bcsecure01-a.akamaihd.net/6/1752604059001/201503/2352/1752604059001_4093861834001_f8cbabd6-161b-49da-921b-
 ▶ posterSources: Array[1]
   published_at: "2015-03-04T20:56:14.260Z"
 ▶ rawSources_: Array[21]
   reference_id: null
 ▶ sources: Array[21]
 ▶ tags: Array[3]
 ▶ textTracks: Array[0]
   text_tracks: (...)
 ▶ get text_tracks: function ()
   thumbnail: "https://bcsecure01-a.akamaihd.net/6/1752604059001/201503/2352/1752604059001_4093861839001_f8cbabd6-161b-49da-92
1"
 ▶ thumbnailSources: Array[1]
   updated_at: "2016-02-03T17:00:59.632Z"
 ▶ __proto__: Object
```

Access mediainfo Data

- Access the data in the mediainfo object by simple `object.property` notation

```
dynamicHTML = "<p>Video Title: <strong>" +
 myPlayer.mediainfo.name + "</strong></p>";

dynamicHTML += "<p>Description: <strong>" +
 myPlayer.mediainfo.description + "</strong></p>";

document.getElementById("textTarget").innerHTML =
 dynamicHTML;
```

Conceptual Blockbuster!!

- You cannot access the `mediainfo` object until the `loadstart` event is dispatched

Task 3: Display Video Information in the HTML Page

**Uses the ready() event/method

CodePen: http://codepen.io/team/bcls/pen/KzyoNG

Using the Standard (iframe) Player Implementation

Use Case: Utilize the iframe implementation of the player and change the video on user interaction

Advantages of Standard (iframe) Player Implementation

- No collisions with existing JavaScript and/or CSS
- Automatically responsive (nearly)
- The iframe eases use in social media apps (or whenever the video will need to "travel" into other apps)

When You Cannot Use iframe Implementation

- Code in the containing page needs to listen for and act on player events
- The player uses styles from the containing page
- The iframe will cause app logic to fail, like a redirect from the containing page

Dynamically Change Video in iframe

- To dynamically change video in an iframe change the query string's the `src` property

```
<iframe src='//players.brightcove.net/921483702001/a5f0f07c-
ce3b-48a4-af02-f5f6c38546ac_default/index.html
?videoId=4341341161001' …></iframe>
```

- Need to remove the existing query string then add a new one

Dynamically Change Video in iframe (cont)

- Plan of action
  1. Get a handle on the `<iframe>` tag
  2. Create a variable with the new query string (new video ID)
  3. Assign the `src` property of the `<iframe>` to a variable
  4. Remove the existing query string from the source
  5. Add the new query string to the source
  6. Assign the new source to the `<iframe>`

Dynamically Change Video in iframe (cont)

```
<function changeVideo() {
 var iframeTag = document.getElementsByTagName("iframe")[0],
  newVideo = "?videoId=3742256815001",
  theSrc = iframeTag.src,
  srcWithoutVideo = theSrc.substring( 0, theSrc.indexOf( "?" ) ),
  newSrc = srcWithoutVideo + newVideo;
 iframeTag.src = newSrc;
}
```

- JavaScript's `theString.substring()` extracts characters from the first parameter to the second

Communicate Between HTML Page and iframe

- It is possible to communicate between the parent page and the iframe
  - Uses HTML postMessage

- Example doc: *Play Video from iframe Parent*
  - //docs.brightcove.com/en/player/brightcove-player/samples/listen-for-play-button.html
- Example doc: *Implementing Playlists Programmatically: Passing video ID on URL page request for iframe*
  - //support.brightcove.com/implementing-playlists-programmatically#Set_initial_video

Task 4: Changing the Video in an iframe Player Implementation

CodePen: http://codepen.io/team/bcls/pen/WwXVNm

Quick Review Poll

DwBP4

Adding a Brightcove Plugin to a Player

Use Case 1: Play IMA3 ads

Use Case 2: Display an overlay that uses data from the mediainfo object

Plugins for Brightcove Player

- A plugin for the Brightcove player uses a combination of HTML, JavaScript and/or CSS to somehow customize the player
  - In other words, anything you can do in a web page, you can do in a plugin

- Broadly, plugins can be developed to
  - Modify default behavior
  - Add functionality
  - Customize appearance

Brightcove Supplied Plugins

- 360 Video
- Ad Only
- Advertising with FreeWheel
- Advertising with IMA3
- Advertising with SSAI
- Chromecast
- Custom Endscreens
- Display Errors
- Display Overlay
- DRM
- HLS
- Live DVRUX
- Picture-in-Picture
- Playlist UI
- Quality Selection
- Social Media

Brightcove Plugins Loaded by Default

- The following are plugins loaded by default
  - Errors
  - HLS

Implementing Plugins Using Studio UI

- One of three ways to use a plugin

- Use the Studio UI to supply the plugin's
  - JavaScript
  - Name
  - Options (if needed)
  - CSS (if needed)

- Plugin associated with ALL instances of the player

Implementing Plugins Using Custom Code

- Second way use a plugin
  - Use a `<script>` tag to manually include the plugin's JavaScript
  - Use a `<link>` tag to manually include the plugin's CSS (if needed)
  - Call the plugin as a method, supplying required options

```
myPlayer.overlay({
  …
});
```

- Plugin associated ONLY with the instance of the player on the page

- Provides flexibility, such as dynamically supplying options

Implementing Plugins Using curl Statements

- Can configure the player, and associated plugins, using the Player Management API

- Details on using curl not part of this course

```
curl --header "Content-Type: application/json" --user $EMAIL --request PATCH \
  --data '{
    "stylesheets": ["http://…/plugin-dev.css"
    ],
    "scripts": ["http://…/plugin-dev.js"
    ],
    "plugins": [{ "name": "pluginDev", "options": {"overlayText": "This …"}
    }]
  }' \
  https://players.api.brightcove.com/v1/accounts/$ACCOUNT_ID/players
     /$PLAYER_ID/configuration
```

Task 5: Play IMA3 Ads (Studio based task)

AND/OR

Task 6: Display an Overlay that Uses mediainfo Data

Task 6 CodePen: http://codepen.io/team/bcls/pen/PNEWQJ
